

Corrections

In the article entitled “Standard Mutation Nomenclature in Molecular Diagnostics: Practical and Educational Challenges” (Volume 9, pages 1–6 of the January 2007 issue of *The Journal of Molecular Diagnostics*), there were errors in the *CFTR* mutations in Table 1. The common *CFTR* mutation c.2988 + 1G>T (AJ575003.1:g.305G>T) (so-called 3120 + 1G>T) should have been listed as c.2988 + 1G>A (AJ575003.1:g.305G>A) (so-called 3120 + 1G>A). The common *CFTR* mutation c.3437delC (so-called 3569delC) should have been listed as c.3527delC (so-called 3659delC), which

leads to a frame shift mutation starting from codon 1176, instead of codon 1146.

In the article entitled “Consensus Characterization of 16 FMR1 Reference Materials: A Consortium Study” (Volume 10, pages 2–12 of the January 2008 issue), the FX PCR primers for the “common platform” method were incorrect. The corrected primer sequences are as follows: Forward primer 5'-TCAGCCGCTCAGCTC-CGTTTC-3' and reverse primer 5'-FAM-CCTCCATCT-TCTCTTCAGCCCTG-3'.
